reminnd under what cecumstance orackle stock was around $115 ?

ChatGPT said:

Oracle (NYSE: ORCL) traded around **US$115 during several periods in late 2023 and the first half of 2024**.

The most notable periods were:

Period	Stock price	Circumstances
November–December 2023	$100–$117	Recovery following a technology-sector sell-off
January–February 2024	$109–$117	Gradual recovery and cloud-business optimism
March 8, 2024	~$114	Trading ahead of quarterly earnings
April–May 2024	$115–$117	Pullback and consolidation after the March rally

Finance Charts +2

An important turning point was March 2024: Oracle subsequently reported strong cloud growth, and its stock rallied significantly.

By June 2024, Oracle reported:

- Cloud revenue growth of 20%.
- Cloud infrastructure revenue growth of 42%.
- Remaining performance obligations increased 44% to $98 billion. Oracle Investor R...

Historical prices are in US dollars.

One question: Are you trying to recall **why Oracle was trading at $115 before its significant rally in 2024**, possibly as a reference for evaluating today's valuation?

ChatGPT said:

I would look at Oracle (NYSE: ORCL) as a **long-term investment rather than a short-term trade**. However, I would be careful about buying it at any price.

The interesting question is whether Oracle's business growth justifies its current valuation compared with when it traded around $115 in 2023–2024.

Let's compare its current fundamentals, growth prospects and valuation before deciding whether to buy.

Oracle on November 2, 2026

Elevated investment risk

~US$130

Approximate intraday price

-6.37%

Today's reported change

Oracle Corp. (ORCL)

$118.74

-$11.93 (9.13%)

Nov 2, 3:42:14 PM EST

1D 5D 1M 6M YTD 1Y 5Y MAX

Open	126.5	Volume	46.2M
Market Cap	356.13B	Day Low	118.59
Year Low	114.5	EPS (TTM)	6.38

Day High	132.76	Year High	265.62
P/E Ratio	18.61		

The interesting development is that Oracle has recently experienced a substantial correction. Its 52-week range is approximately $114.50–$265.62. Yahoo Finance

Why the stock is under pressure today:

- Oracle announced plans for another US$20 billion financing: $10 billion in new shares and $10 billion in bonds.
- Its debt has reached approximately $125 billion.
- Its free cash flow is deeply negative because of massive AI data-centre investments.
- Investors are concerned about shareholder dilution and whether future AI revenues will justify the investment. Beinsure +1

The bull case

There are some very attractive numbers:

Metric	Latest information
FY2026 revenue	$67.4B
FY2026 cloud revenue growth	39%
Cloud contract backlog (RPO)	$638B
FY2027 revenue target	$90B+
FY2030 revenue target	$225B+

Oracle expects free cash flow to turn positive in the second half of FY2028 and exceed $30 billion in FY2029. These are management targets, not guaranteed outcomes. Oracle Invest... +1

My assessment: Is US$130 attractive?

I see three possible scenarios:

Scenario	What happens
Bullish	AI infrastructure demand converts into profitable cloud revenue; stock recovers toward $180–$220

Base case	Growth remains strong, but debt and capital spending limit valuation recovery
Bearish	AI infrastructure spending exceeds revenue generation; further dilution and share-price declines

These are illustrative scenarios, not price forecasts.

How I would approach buying

If I were considering ORCL as a 3–5-year investment, I would prefer to build a position gradually rather than invest everything at once.

For example:

- First purchase: 30% of intended investment around current levels.
- Second purchase: 30% if the stock falls another 10%.
- Third purchase: 40% after the next earnings report confirms that cloud growth and cash generation are progressing.

I would pay particular attention to the December 2026 earnings report.

One important consideration

The old $115 price is not automatically a bargain benchmark. Oracle's business, debt, share count and growth expectations have changed considerably since 2024.

My verdict: Around $130, Oracle deserves serious consideration for a long-term investor, but I would not call it a low-risk bargain. Its AI opportunity is substantial, but so is its financing risk.

I'd like to understand your investment horizon before suggesting a more specific entry price.

Are you considering holding Oracle for **1–2 years or 5+ years**?
